EXPERIENCE

Ford Motor Company

July 2026 – Present

Software Engineer, Vehicle Software Update Deployment

Dearborn, MI

- Support over-the-air (OTA) update deployments across production Java microservices serving in-field vehicles

Ford Motor Company

July 2024 – July 2026

Rotational Engineering Program

Dearborn, MI

Software Engineer, Autonomy Analytics – Latitude AI

Apr 2026 – July 2026

- Saved 15+ engineering hours per week by automating build-over-build exports of predicted behavior progressions and regressions from a Plotly Dash dashboard into scenario-ordered CSVs with pandas
- Resolved a scoring logic defect in an upstream predicted behavior metric across hundreds of datasets, correcting invalid results that masked true model performance

Software Engineer, OTA Platform

Jan 2026 – Apr 2026

- Architected an OTA installation time estimation module for the Ford Universal EV platform, exposing predicted update durations and performance metrics consumed by vehicle HMI and fleet management systems
- Implemented structured, filterable logging across Rust-based OTA services, reducing time-to-diagnose for failures in distributed vehicle software update workflows

Software Engineer, DevOps

July 2025 – Jan 2026

- Prototyped API endpoints in Python and FastAPI for an automated software release tool, reducing manual coordination overhead across 5+ internal teams
- Established a unit test build system across 12 legacy controls software features using Ceedling, enabling continuous validation of safety-critical embedded components

Software Engineer, Perception Evaluation

Jan 2025 – July 2025

- Designed a BigQuery-backed metrics infrastructure for an in-house machine learning model, automating metric population through data pipeline integration and visualizing results in Apache Superset dashboards
- Automated data ingestion and indexing for Ford's low-speed autonomy perception evaluation pipeline through a Python API, eliminating manual data handling across 5 sensor modalities
- Evaluated perception features across thousands of datasets, surfacing error cases that replaced ad-hoc reporting workflows and informed model retraining decisions

Software Engineer, EV Auxiliary Controls

July 2024 – Jan 2025

- Delivered 7 features ahead of schedule for Ford's first in-house bidirectional charging controls stack, advancing project timelines by up to 3 months

Ford Motor Company

May 2023 – Aug 2023

Connected Vehicle Software Intern

Dearborn, MI

- Led a safety-critical ASIL-C component from ISO 26262 requirement authoring through platform integration, developing embedded C for next-generation EVs with TDD at near-100% test coverage using gcovr and Ceedling

SKILLS

Languages: Python, Rust, C, SQL, Java

Technologies: pandas, BigQuery, Apache Superset, Plotly Dash, pytest, Ceedling, gcovr, Docker, Bazel, Git, Gerrit

EDUCATION

Georgia Institute of Technology

Master of Science in Computer Science

In Progress

Virginia Polytechnic Institute and State University

Bachelor of Science in Computer Science, Minors in Cybersecurity, Spanish

May 2024
